

Number Slide

Bluetooth or wired, compact keyboard

Overview

The Number Slide's retractable number pad slides out when you need it and away when you are finished. This feature delivers important ergonomic advantages over conventional standard or mini keyboards.

Compared to standard keyboards, the Number Slide reduces the distance you need to reach to use your mouse, allowing you to adopt a more comfortable and suitable posture.

The Number Slide allows your mouse to be positioned in front of your left or right shoulder (depending in which hand you use your mouse), which encourages a good arm/shoulder position when using your mouse.

Being so compact, the Number Slide frees up space at your workstation so you can bring work closer to you without compromising functionality.

Features
